

Pulaski County has been very active with the Healthy Yards for Clear Streams program:

Currently, the workshops are being broadcast locally on Waynesville SD Cable Channel:
speaker 1 and speaker 2, four times each the first week
speaker 3 and speaker 4, four times each the next week
speaker 5 and speaker 6, four times each the last week

The above programming will be re-run later to allow more people to see the workshops

Pulaski volunteers set up HYCS booths at the following sites:

Earth Day at UMR

Fort Leonard Wood (FLW) - 400 kids

Garden info booths for opening days at 3 area garden centers

HYCS Demo Native Garden is a project at a triangle of Exit 156 of I-44. Since people cannot park to view it, the high school will film it. Nel Yates, the local expert, will walk around the garden and teach about each native plant. This broadcast will air on the Waynesville/Fort Leonard Wood school channel through the summer

HYCS: "Frog Fest" May 2 and 3: Their booth theme was "SAVE THE FROGS and FISH. SAVE THE ROUBIDOUX, PINEY, and GASCONADE RIVERS." The Roubidoux runs through the area, where locals fish. The Pulaski County watershed map will be featured:

http://www.dnr.mo.gov/env/wpp/watersheds/ws_pulaski.htm, along with rain-barrel diagrams, rain-garden photos/diagrams, and native plants, to save frogs/fish. A colorized watershed model will also be on display:

Pulaski and Phelps Counties are collaborating to offer a **HYCS Rain-barrel Class** on May 11. The workshop will be at the Bray Conservation Area near Rolla. This is through the support of their MDC advisors for the Meramec Hills Master Naturalists who are co-sponsors with MGs for HYCS. They plan on filming it to broadcast on school cable channels in Rolla and Waynesville/Fort Leonard Wood
